

ADDENDUM #1

REGULAR MEETING OF CITY COUNCIL

2007 06 11

4:30 P.M.

PART ONE – CONSENT AGENDA

5. COMMUNICATIONS AND ROUTINE REPORTS OF CITY DEPARTMENTS; BOARDS AND COMMITTEES

- (a) Further correspondence from AMO is attached for the information of Council.
- (ff) Two letters requesting permission for a private property liquor license extensions are attached for the consideration of Council.

Mover - Councillor F. Manzo

Seconder - Councillor J. Caicco

Resolved that City Council has no objection to the proposed extended licensed area as detailed in the written requests for a liquor license extension on private property for an outdoor event on the following stated date and times:

Holiday Inn of Sault Ste. Marie - Chamber of Commerce Take 5 Event - Thursday, June 14, 2007 from 5:30 to 7:30 p.m.

Portuguese Canadian Association - Picnic - 5 Cornwall Street - Saturday, June 23, 2007 from 12:00 to 6:00 p.m.

- (gg) A news release from Algoma Steel Inc. is attached for the information of Council.

PART TWO – REGULAR AGENDA

6. REPORTS OF CITY DEPARTMENTS; BOARDS AND COMMITTEES

6. (5) LEGAL

- (a) **December 26th Boxing Day - Request from the Northern Retail Professionals Association to Close Retail Business Establishments**

A resolution passed by the Sault Ste. Marie Economic Development Corporation Board of Directors at its June 4, 2007 meeting is attached for the information of Council.

ONTARIO TAKES ACTION TO ADDRESS LEAD IN WATER

Acting on Expert Advice Will Keep Ontario Families Safe

QUEEN'S PARK — The Ontario government will implement recommendations made earlier this week by its Drinking Water Advisory Council and advice of the Chief Medical Officer of Health and Chief Drinking Water Inspector to expand water safety protections and reduce potential levels of lead intake for pregnant women and children six and under.

"Lead levels in blood samples of Ontarians have fallen dramatically during the past three decades, due to the phasing-out of lead in paint, gasoline and water pipes," said Acting Chief Medical Officer of Health Dr. George Pasut. "While the health risks are minimal, and drinking water is a minor contributor to blood lead levels, today's action will further protect pregnant women and children six and under in older neighbourhoods with elevated lead levels."

"Let there be no misunderstanding: tap water in this province is among the safest in the world, and today's actions will make it even safer," said Jim Smith, Ontario's Chief Drinking Water Inspector. "Adjusting water chemistry in municipal systems so it picks up less lead should effectively resolve this problem."

The government's action plan builds on the expert advice of Ontario's Drinking Water Advisory Council, Chief Drinking Water Inspector and Chief Medical Officer of Health. Ontario's action plan is aimed at protecting those most vulnerable to lead: pregnant women and young children living in older neighbourhoods in certain communities. Today's actions help protect drinking water from being contaminated by lead after it leaves the municipal water treatment system.

The action plan includes the following:

- Starting today, schools and day cares must test for lead annually. Any of these facilities built before 1990 must flush their systems daily, rather than the existing weekly standard.
- A proposed new regulation to make it mandatory for municipalities to regularly sample for lead at a specified number of taps, notify home and facility owners of the results from their taps and take corrective action in systems with elevated lead levels.
- Assisting low-income parents with infants and young children and pregnant women living in older neighbourhoods with the cost of filters where they are recommended.
- Providing expert advice to municipalities to adjust water chemistry in municipal systems to pick up less lead.
- Encouraging municipalities to conduct public education campaigns, such as inserts in water bill mailings.
- Providing best practices for municipalities to help make lead line replacement more affordable for homeowners, such as on-bill financing.

The regulations requiring flushing and testing of water at day cares and schools take effect immediately and are available on Ontario's Environmental Registry at www.ontario.ca/environmentalregistry. The registry number is 010-0734. The other regulatory amendments are being posted for public comment over the next two weeks. The registry numbers are 010-0743 and 010-0490. Following public input, the government will put the new regulatory requirements into effect.

The Ministry of the Environment dispatched water inspectors to London after water testing revealed higher-than-acceptable lead levels. Ontario Environment Minister Laurel Broten asked the Drinking Water Advisory Council (ODWAC) to expedite a review of a draft federal guideline on corrosion control that could reduce leaching of lead from service lines and plumbing. The Chief Drinking Water Inspector ordered 36 communities to undertake immediate testing. The advice provided by ODWAC last week included extending monitoring and testing and new corrosion control programs. That advice along with input from the Chief Medical Officer of Health and Chief Drinking Water Inspector are the foundation of today's action plan.

"Our top priority is the health and safety of the people of Ontario," said Broten. "Today, we're mobilizing a plan that demonstrates the government's ability to keep the people of this province safe."

"The province's Chief Medical Officer of Health has advised me that the health risks of lead in drinking water are minimal," said Ontario Minister of Health George Smitherman. "However, there is reason for caution and action directed at young children six and under, as well as pregnant women, who routinely consume water in older neighbourhoods where lead pipes and plumbing still exist."

"In Sierra Legal's national Drinking Water Report Card released last fall, Ontario was top of the class", said Dr. Anastasia Lintner, staff lawyer and economist with Sierra Legal. "We expect even our A students to strive for continuous improvement in drinking water protection, as demonstrated by the Ministry of the Environment's timely response to this public health issue."

SUPPORTIVE STATEMENTS FOR THE McGUIRE GOVERNMENT'S ACTIONS ON LEAD AND WATER

"In Sierra Legal's national Drinking Water Report Card released last fall, Ontario was top of the class. We expect even our A students to strive for continuous improvement in drinking water protection, as demonstrated by the Ministry of the Environment's timely response to this public health issue."

- *Dr. Anastasia Lintner, staff lawyer and economist, Sierra Legal.*

"Adding water testing at taps will be a good step forward in ensuring that safe water is delivered in Ontario communities. Increased flushing of water in schools and child care facilities is also necessary to protect children. Complementary educational outreach is essential. Homeowners and private or informal child care facilities need to follow the same precautions. Lead is a legacy chemical that requires ongoing vigilance. Older homes with lead service lines also contain old lead-bearing paint. Education and awareness is key to avoiding lead exposure for all children."

- *Kathleen Cooper, Senior Researcher, Canadian Environmental Law Association*

"Municipalities are eager to take necessary steps to protect human health and to better understand the scope of the problem. AMO's advice to the government was that this is a complex problem that requires a considered and balanced approach, focused on safeguarding the health of residents in our communities."

- *Doug Reycraft, President, Association of Municipalities of Ontario*

"The importance of lead on the health of young children and the evidence that there are some locations where lead is being leached from service lines warrants a prompt response from the Ontario Government. The proposed immediate action to monitor and to provide appropriate flushing procedures for schools will reduce the risk to children attending these facilities. On-going monitoring will better define whether the risk is present and should then dictate any further course of action. The long term approach as being proposed by the Ministry of the Environment of accelerated lead service replacement, increased monitoring, and adjustment of municipal water quality parameters, i.e. pH and alkalinity, to reduce the potential for lead corrosion are welcome and necessary initiatives."

- *Rod Holme, Ontario Water Works Association*

"I'm very pleased that the Ministry of the Environment is moving so quickly in proposing to implement the Council's recommendations on reducing lead in the province's municipal drinking water."

- *Jim Merritt, Chair of the Ontario Drinking Water Advisory Council.*

Province Announces New Requirements for Lead Control in Drinking Water

Issue: The Honourable Laurel Broten, Minister of the Environment, announced new water testing and treatment measures today to control lead leaching in older homes.

Announcement:

The Ontario government has taken steps today to respond to the risks of lead leaching into drinking water through lead water pipes present in some older homes. Municipalities will have new responsibilities for testing and control programs for lead leaching. A copy of the announcement is linked to this Alert.

Key elements of the announcement that will impact municipalities include:

- A proposed new regulation to make it mandatory for municipalities to regularly sample for lead at a specified number of taps, notify home and facility owners of the results from their taps and take corrective action in systems with elevated lead levels.
- The Province will provide expert advice to municipalities to adjust water chemistry in municipal systems to pick up less lead.
- The Province will encourage municipalities to conduct public education campaigns, such as inserts in water bill mailings.
- The Province will provide best practices for municipalities to help make lead line replacement more affordable for homeowners, such as on-bill financing.

Proposed new testing and corrosion control requirements for municipalities are posted on the Environmental Registry at www.ebr.gov.on.ca (EBR posting # 010-0743) for the next 2 weeks.

The testing and measures announced reflect advice given to the government by the Ontario Drinking Water Advisory Council (ODWAC) (EBR posting # 010-0725) and the United States Environmental Protection Agency's requirements to deal with the same issue in areas across the U.S. Based on ODWAC advice, measures to control for lead leaching and corrosion in drinking water available to municipalities and homeowners include:

- Flushing of pipes for at least five minutes before use
- Adjusting the PH and alkalinity of delivered water to reduce lead leaching
- Certified point of use devices to filter lead
- Replacement of lead distribution and service lines
- Replacement of lead solders in home plumbing

Member Communication

To reduce lead levels in drinking water the Council recommended the government adopt a two-tier approach to testing and monitoring as well as mandatory corrosion control requirements. The Council also recommended that the Ministry of the Environment encourage municipalities to accelerate lead service line replacement and institute a program to encourage homeowners to replace their part of the service lines.

Implications:

- Municipalities will face requirements for staff time and expertise to test water and institute corrosion control measures;
- Testing at the tap will measure the lead in delivered water, including lead picked up in private pipes;
- Testing in the distribution system will continue to measure lead in the water delivered to the homeowner's property;
- Many municipalities have long-standing lead distribution line replacement programs that have been directed toward dealing with the issue of lead line replacement and financing. In some cases, the lead lines owned by the municipality have been replaced while homeowners have not replaced the privately owned lead pipes that connect to the municipal system. Such circumstances will add to the complexity of managing corrosion testing and control programs.

Background:

On May 23rd, 2007, Ontario's Chief Drinking Water Inspector issued orders to 36 Ontario municipalities to test drinking water at the tap of 20 residences known or likely to have lead service pipes for lead. In the intervening two weeks those municipalities undertook strong efforts to deliver their results to the Province by the deadline of June 6, 2007. The tests showed that 50 per cent of those communities had at least one sample that exceeded maximum standards for lead. The program announced today was in direct response to the results of that sampling.

Action:

AMO's advice to the government on this matter has been that this is a complex problem that requires a considered and balanced approach, focused on safeguarding the health of residents in our communities. AMO also advised that addressing this problem will require the combined efforts and resources of the Province, municipalities and property owners.

AMO will review the government's plan in greater detail and keep members informed of further developments.

This information is available in the Policy Issues section of the AMO website at www.amo.on.ca.

Lead in Water

AMO Key Messages

- Delivering safe, clean drinking water is a universal priority that all governments and homeowners share.
 - The Province regulates water systems, and to some degree, provides funding for them;
 - Municipalities fund the bulk of water infrastructure and make sure safe drinking water is delivered to properties;
 - Property owners are responsible for ensuring that the pipes on their property and in the their homes, including fittings are safe.
- It is important to ensure that the public is well informed about the potential risks of lead pipes in older homes – and who may be at risk.
- It is also important to note that this is a concern in older homes throughout Canada, the US and Europe. The problem is not unique to Ontario or to Ontario municipalities.
- In many places in Ontario, the work of replacing lead pipes in both municipal infrastructure and lines owned by the homeowner has been underway for some time.
- Plumbing and health standards have changed over time. The standards that existed when these homes were built are no longer acceptable. At the same time, we have to recognize what it would take to upgrade the infrastructure of entire communities. That takes time and a tremendous investment.
- There is a broad range of measures that can help address the situation:
 - improved public education;
 - extend monitoring programs;
 - treatment measures that reduce the potential of lead leaching;
 - taking a look at provincial plumbing standards to see if more can be done;
 - continuing to upgrade municipal infrastructure; and importantly
 - provincial or federal programs are needed to help homeowners who require financial assistance to replace the pipes that they own.
- There is no mystery as to why municipalities have been struggling to maintain infrastructure of all kinds including aging water systems. The fiscal arrangements that municipalities have been struggling with for more than decade have resulted directly in an unsustainable municipal infrastructure deficit in every part of Ontario.
- Property taxpayers in Ontario already pay much more than those elsewhere in the country as a result of the provincial programs that they are mandated to pay for either fully or as a cost-shared requirement. Fixing pipes in houses or on private property as yet another mandated cost / service responsibility would be an extremely expensive proposition and unfair to property taxpayers who do not have the problem.
- Under current provincial-municipal fiscal arrangements, about \$3 billion a year in funding that could be invested in infrastructure is being used to subsidize provincial health and social services programs

Lead in Water Questions and Answers

The Ministry is proposing new testing standards. What will that mean for municipalities?

- Sampling and testing municipal drinking water is something the municipalities do all the time - rigorously and in accordance with Ontario's standards.
- If the best available scientific advice is that those standards need to be revised to better protect human health in our communities, municipalities will work to meet the new standards.

Are you concerned about the costs?

- Delivering safe, clean drinking water that safeguards the health of people in our communities is top priority for municipal governments. It's one we share with the Province and with residents and homeowners in our communities.
- Where there are additional costs that will affect water rates in our communities, I expect it is a price that water users are prepared to pay.

There has been some debate about the 6 hour vs. 35 minute rule for a standing sample. Are you concerned that the Province is going with 6 hours?

- I don't think that is a matter that I can comment on at this time without further study. Ultimately, the government will need to make a determination.

Are you aware that the government's own advisory committee recommended 35 minutes rather than 6 hours?

- I am. I don't think that is a matter that I can comment on today without further study. Ultimately, the government will need to make a determination.

If schools can begin dealing with the new standards immediately, why can't municipalities undertake the new standards immediately?

- I think municipalities will be eager to work with the new measures as soon as possible
- At the same time, we need to recognize that a very large proportion of Ontario's four and a half million households rely on water from hundreds of municipal systems. Putting the capacity in place for these new standards on that kind of scale is going to take some time.

Did you provide any advice to the government on how to respond to this problem?

- We did have an opportunity over the past few days to talk to the Ministry of the Environment on how they should respond to the problem.
- Our strongest message was that municipalities, like the Province, are eager to take necessary steps to protect human health and to better understand the scope of the problem.
- Most important is to ensure that the public is well informed about the cause and potential risks of lead leaching in older homes – and who may be at risk.
- Our advice was that this is a complex problem whose solution will require efforts and resources from the Province, from municipalities and from homeowners where, in many cases, the source of lead leaching may exist.

Why haven't municipalities replaced all the lead service lines in their systems?

- The problem is not unique to Ontario or to Ontario municipalities. It is a national and international situation.
- In many communities in Ontario, the work of replacing lead pipes in both municipal infrastructure and lines owned by the homeowner has been underway for some time. However, this is a process that takes significant resources and construction time.
- In fact, when municipal governments have replaced their lead pipes, they discuss the situation where they see a lead pipe on the homeowner's property and seek direction from the homeowner on whether or not they want their pipes changed. In some cases, the homeowner agrees, has the work done and pays for it. In other cases, they do not and are informed of the need to run the water first before using it.

Has AMO taken a position on the Swain Report?

- The Swain Report was advice to Government.
- It did highlight some astounding facts about the magnitude of the infrastructure deficit on Ontario's water and sewer systems. According to the panel's report, to replace the aging water and sewer systems would take \$34 Billion over the next 15 years.
- And current provincial-municipal fiscal arrangements mean that municipalities cannot solve the problem alone.
 - Under current provincial-municipal fiscal arrangements, about \$3 billion a year in municipal revenue is diverted from municipal use to subsidize provincial health and social services programs

COMRIF Asset Management Program - Update

Issue:

The "expressions of interest" received from municipalities to participate in the Asset Management Program (AMP) of the Canada-Ontario Municipal Rural Infrastructure Fund (COMRIF) are now under review by the COMRIF Joint Secretariat. Municipalities may have already been contacted or can expect to be contacted by COMRIF staff in the near future as the review process is nearing completion.

Background:

In the COMRIF agreement signed November 15, 2004, both Canada and Ontario committed to invest up to a combined \$5.96 million to assist eligible municipalities and Local Services Boards with asset management planning and capacity building through the "Asset Management Program (AMP)". Including a 1/3 municipal matching contribution up to almost \$3 million, the total investment in this program will reach almost \$9 million.

Although this funding cannot be expected to fully meet the needs of municipalities, the Asset Management Program funds will help eligible municipalities improve and increase their capacity to manage their infrastructure assets. Communities can use this funding in a variety of ways: to enhance knowledge of their existing infrastructure assets; evaluate life-cycle costs associated with the infrastructure they own and operate; assess the capacity of current infrastructure and identify future needs; plan and make infrastructure financing decisions; and, train municipal staff in long-term infrastructure management.

Municipalities eligible for funding under COMRIF are also eligible for AMP funding. Letters were sent to eligible municipalities in December 2006 with instructions to complete an "expression of interest" form. Municipalities are in the process of being contacted by COMRIF staff as the review of these forms is completed.

Additional information about COMRIF, including the AMP, is available by visiting www.comrif.ca, or contacting the Joint Secretariat by e-mail at info@comrif.ca or by phone at 1-866-306-7827.

Notification / Avis

The above information is collected pursuant to the Liquor Licence Act, R.S.O. 1990, chapter L.19. The principal purpose of the collection is to determine eligibility for the issuance of a temporary extension of a liquor licence. The information may also be disclosed pursuant to the Freedom of Information and Protection of Privacy Act, R.S.O. 1990, chapter F.31. For questions about the collection of this information, please contact the Manager, Manufacturers & Special Licensing, Advertising & Promotions, Alcohol and Gaming Commission of Ontario, 20 Dundas St W, 7th Floor, Toronto ON M5G 2N6, telephone: 416 325-8700, toll free in Ontario 1 800 522-2876. Email address: licensing@agco.on.ca

Les renseignements fournis dans la présente formule sont recueillis aux termes de la Loi sur les permis d'alcool, L.R.O. 1990, chap. L.19, dans le but premier de déterminer l'admissibilité à l'agrandissement temporaire des locaux pourvus d'un permis. Ces renseignements peuvent également être divulgués aux termes de la Loi sur l'accès à l'information et la protection de la vie privée, L.R.O. 1990, chap. F.31. Les questions relatives à la collecte de renseignements doivent être adressées à la ou au chef du service Délivrance des permis aux fabricants et des permis spéciaux, publicité et promotion, Commission des alcools et des jeux de l'Ontario, 20, rue

ESTABLISHMENT NUMBER: 11193

The Alcohol and Gaming Commission has received your application for a temporary extension of licence. As a result of the deficiencies noted below, your application cannot be further processed until we receive all required information. If all required information is not received 10 days prior to the event, your application MAY not be processed and approved.

Sketch

- must indicate the type of fencing that will enclose the entire area (i.e., wooden, snow, metal, etc.).

Approval Letters:

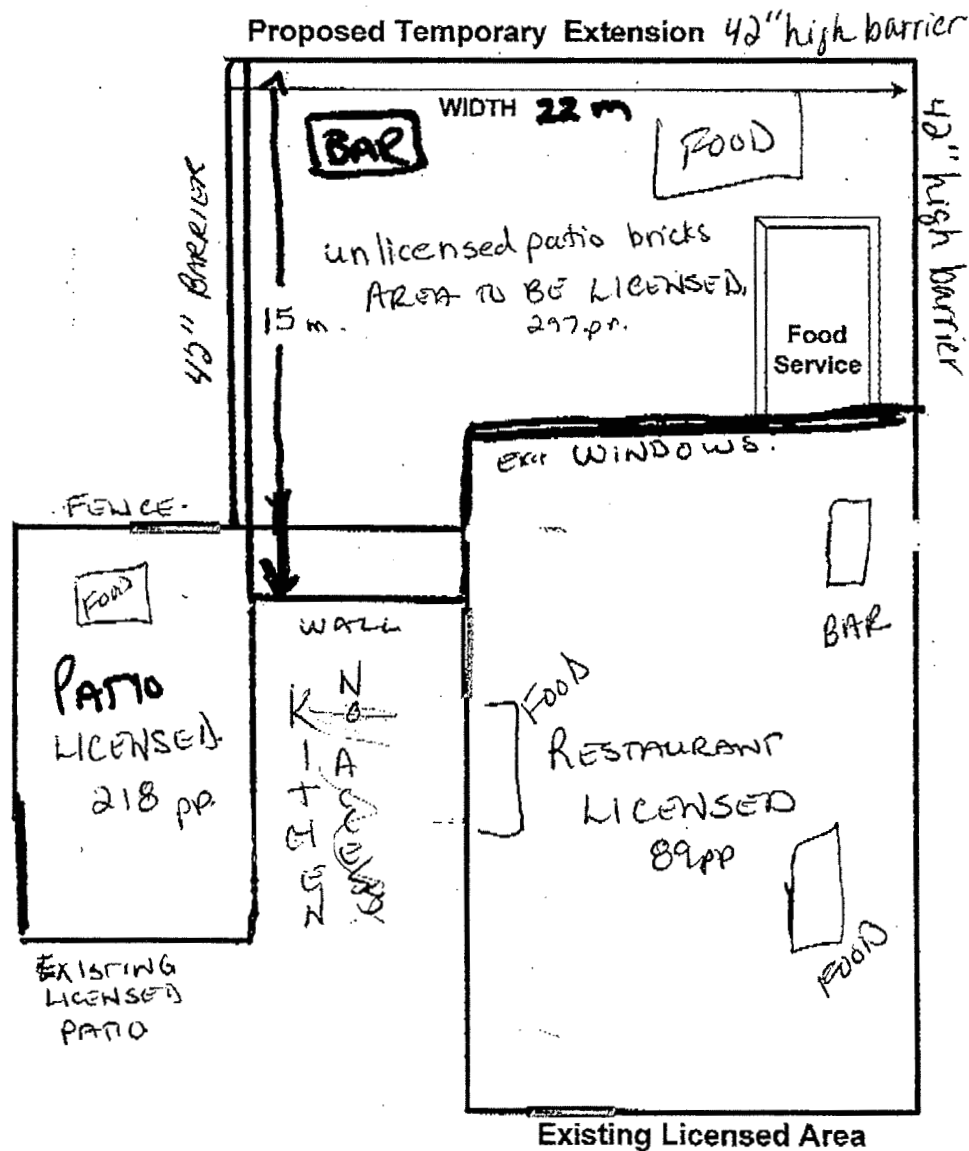

- if the proposed extension is outdoors, a letter of "Non-Objection" is required from the Municipal Clerk

Please call me at (416) 326-0400 if you have any questions or concerns.

Sincerely,

A handwritten signature in black ink, appearing to read "C Morrow".

Re: Application for a Special Occasion Permit, Outdoor Event, *June 23*
Portuguese Canadian Association of Sault Ste. Marie.

The following is submitted as per guidelines for obtaining a LCBO permit to consume liquor outdoors. The event planned is a picnic at the Portuguese Club location, 5 Cornwall Street. This is private property, consisting of three acres fenced all around by a four foot wire fence. There is a main entrance off North Street which is not gated, and two pedestrian gateways. In the middle of the property, approx. 30 meters from the club building, is a cement platform (a basketball court from the days when this was Corpus Christie school) where tables will be set up, and this area cordoned off. Consumption of liquor will be restricted to this area. Food will consist of hamburgers, hot dogs, sardines, soup. Method of cooking will be barbeque positioned nearby, on blacktop surface. Number of people expected is approx. For any questions, please contact the undersigned at any time.

Sincerely,

Tony Pereira

President, Portuguese Canadian Association General Assembly.

NEWS RELEASE

Monday, June 11, 2007

TSX Symbol: AGA

ALGOMA STEEL ANNOUNCES RESULT OF SHAREHOLDER VOTE ON ITS ACQUISITION BY ESSAR

SAULT STE. MARIE, ONTARIO – Algoma Steel Inc. today announced that, at its Annual and Special Meeting of Shareholders held today (the “Meeting”), shareholders approved an arrangement involving the acquisition by a subsidiary of Essar Steel Holdings Limited (“Essar”) of all of Algoma’s outstanding common shares for all cash consideration of \$56 per share (the “Arrangement”). The Arrangement was approved by 82.6% of the votes cast at the Meeting.

Algoma, Essar and their advisors expect that the balance of the preconditions to the closing of the Arrangement are likely to be satisfied over the next several days including final Court approval of the Arrangement scheduled for June 13, 2007. Depending on various factors, the closing of the Arrangement is anticipated to occur in the week of June 18, 2007.

Algoma Steel Inc. is an integrated steel producer based in Sault Ste. Marie, Ontario. Revenues are derived primarily from the manufacture and sale of rolled steel products including hot and cold rolled sheet and plate.

SAULT STE. MARIE ECONOMIC DEVELOPMENT CORPORATION

Board of Directors Meeting

Monday, June 4, 2007

Russ Ramsay Board Room – Civic Centre
11:30 am.

AGENDA ITEM 5.6

Moved by: C. Greensted

Seconded by: M. Bruno

Whereas Sault Ste. Marie is proudly *Open for Business*; and

Whereas, a competitive retail sector is a hallmark of a healthy local economy; and

Whereas Sault Ste. Marie's major retailers previously sought and strongly supported permitting businesses to decide to close or remain open on Boxing Day for the past five years; and

Whereas, many consumers have shown their support for this initiative during the past five years by shopping on Boxing Day;

Be it resolved that the Sault Ste. Marie Economic Development Corporation supports permitting local businesses to decide to choose to remain open on boxing Day.
